PARKING MANAGEMENT SYSTEMS AND SOLUTIONS

DESIGNA

LEADING PARKING TECHNOLOGY WITH DESIGNA

For more than 75 years, a visionary mindset and an unwavering drive for progress has shaped our success in parking management. Developing innovative products and new services is our passion. From customized parking facilities to large-scale systems managing tens of thousands of parking spaces or forming part of an entire city's mobility network, we lead the future of parking.

Designa is a specialist in fully automated parking systems. More than 600 employees in 60 countries are committed every day to delivering outstanding results for our customers. With our holistic product portfolio, we provide smart solutions for complex requirements. Each system is precisely tailored to the specific needs of our clients – whether for an airport, hotel, shopping center, university, hospital, or an entire city.

Working in close partnership with our customers, we continuously break new ground and evolve. All components are meticulously adapted to their intended application and deliberately designed for seamless interaction. At Designa, everything – from development to production – comes from a single source and is manufactured in Germany. This is what makes Designa products truly unique.

**+ DESIGNA GLOBAL PARTNERS**

A constantly evolving market demands innovative technologies. With the Designa CONNECT Series, we are ready for the future.

Whether for short-term, recurring, or long-term parking, the Designa CONNECT Series offers flexible deployment and the right solution for every scenario. Powered by intelligent software, it operates efficiently and can even increase your revenue. We deliver seamless processes combined with ticketless parking and mobile payment solutions – ensuring a smooth,

convenient parking experience. The connected, fully automated system is precisely tailored to your individual requirements. It delivers smart convenience, and thanks to system compatibility, can be upgraded or expanded at any time with ease.

DESIGNA CONNECT SERIES

**Designa CONNECT PAY 500
CASH & CARD**

**Designa CONNECT PAY 500
CASHLESS**

**Designa CONNECT PAY 500
COINLESS**

Our compact payment terminals have already received awards for their design and can be used for all payment processes. You are free to select the payment station that best fits your needs and decide which payment options you would like to offer your customers – cashless, coinless, or without restrictions for all payment methods. High usability, intuitive user interfaces, and simple operation ensure a smooth and efficient payment process.

EXCLUSIVE TO Designa CONNECT PAY 500 CASH & CARD
The optional 18.5" TFT color display enables the presentation of digital media content, including advertising.

PAYMENT TERMINALS

- Housing, door, and base made of stainless steel 1.4301 (V2A).
- Exterior and interior powder-coated with an environmentally resistant matte fine-texture finish.
- Weather-resistant, UV-stable Plexiglas® front panel.
- Frames can be illuminated in various colors.
- All standard payment methods supported.

SELECT YOUR OPTION

BARCODE

- Barcode card reader for processing barcode tickets, featuring an integrated printer for printing barcodes as well as parking facility data, payment time, and ticket number on coated paper tickets or magnetic stripe tickets.

Designa CONNECT PAY FRAME 600

The Designa CONNECT PAY FRAME 600 is an innovative payment terminal designed for modern parking systems. Featuring a 27" full-touch TFT color display and intuitive user guidance, it enables fast and effortless payment – via ticket scan or license plate entry (PAY BY PLATE). Thanks to its modular design, the system can be configured to meet individual requirements. The illuminated LED frame and compact wall-mounted design make it ideal for indoor installations.
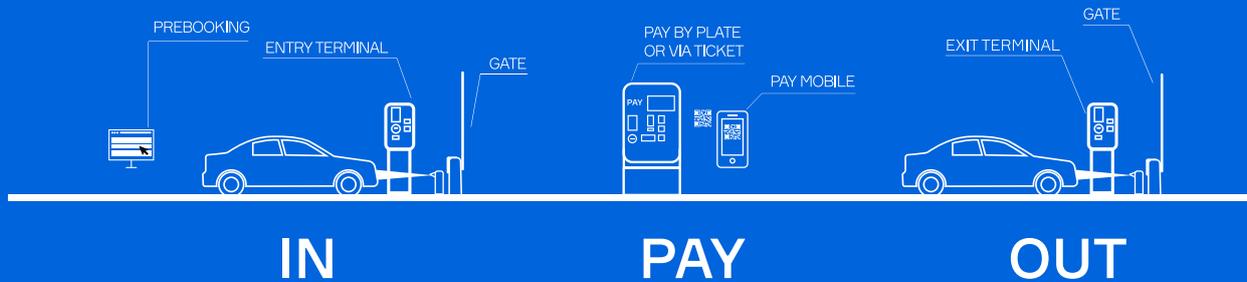

NOW YOU CAN:

- Enable customers to complete the payment process quickly and efficiently using an intuitive user interface.
- Offer customers the benefits of contactless smart card systems (RFID) such as MIFARE, LEGIC, HID, and more – for example, for identifying contract parking and value cards when extending, reloading, or settling outstanding payments.
- Provide customers with barrier-free access to the payment terminal.
- Allow contract parking cards to be extended and additional payments to be made quickly without detours.
- Enhance your interior space with premium payment terminal design and place the terminals flexibly and securely within enclosed areas.
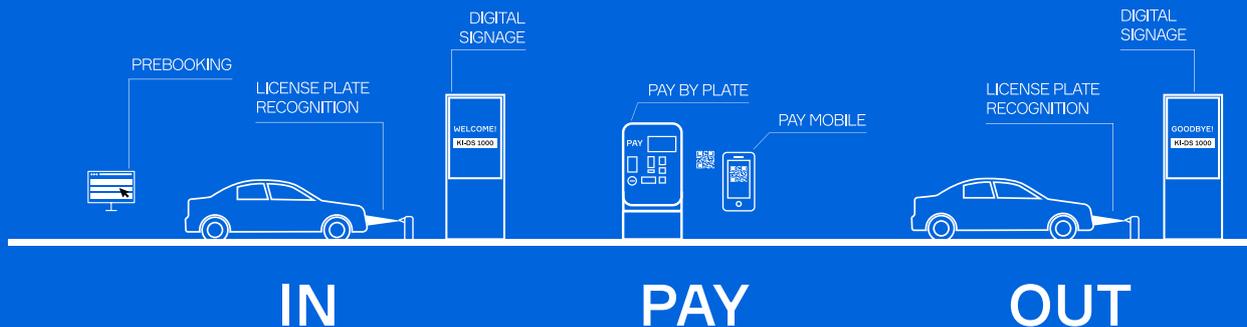

INTEGRATION INTO TICKETLESS PARKING SOLUTIONS.

Optimize your parking system and enhance the customer experience with ticketless parking. Our state-of-the-art solution eliminates physical tickets and enables seamless entry and exit. With mobile ticket payment or license plate – based payment, you can offer your customers a faster, more convenient, and cost-efficient parking solution.

TICKETLESS HYBRID

FREEFLOW

DESIGNA CONNECT LANE, GATE & DIGITAL SIGNAGE

Designa CONNECT GATE 600

A reliable, energy-efficient barrier featuring modern design combined with state-of-the-art control technology. This robust, high-quality barrier has been developed in accordance with the latest parking management standards.

- Easy configuration during installation.
- Adjustable opening and closing speeds.
- Automatic detection of vehicles with high ground clearance through the Automatic Boost Function (ASB).
- Reduced operating costs thanks to maximum energy efficiency.
- Suitable for operation in areas with high wind.

Designa CONNECT LANE 600 FULL IN/OUT

The entry and exit terminal of the new Designa device generation features a smart, modular design combined with modern, future-ready technology. The placement of the control elements and a user-friendly touchscreen ensure intuitive operation and a smooth parking process. An additional display for presenting customized digital content, such as advertising, is an available option.

Designa DIGITAL SIGNAGE

For customer communication and additional advertising opportunities. By integrating displays into your parking systems, you can strategically present digital content such as advertising videos, pricing information, or use them as wayfinding guidance. The displays are suitable for both indoor and outdoor installations.

## Designa CONNECT LANE 600 SLIM & DOOR 600 SLIM

The smart Designa CONNECT SLIM multifunction terminal has been specifically designed to support a wide range of identification methods and ticketless parking. Customers can scan barcodes and QR codes, as well as use contactless access methods such as RFID media. For license plate recognition, vehicle plates are identified via LPR cameras installed. As standard, the Designa CONNECT SLIM is supplied as a pedestal-mounted unit.

Designa CONNECT LANE 600 LIGHT & DOOR 600 LIGHT

The Designa CONNECT LIGHT systems were specifically developed by Designa for use in combination with ticketless parking management solutions based on license plate recognition. The systems can be deployed as lane terminals or door terminals with basic options and integrated touchscreens. Optional features such as RFID and QR code readers can be added modularly.

DESIGNA CONNECT POS & VALIDATOR

DESIGNA CONNECT E-CHARGE & FOCUS LPR

Designa CONNECT POS 500

The Compact Solution for Manual Payment Stations

By combining a PC with touchscreen technology, intuitive software, a barcode scanner for reading barcodes and QR codes, and a receipt printer, the Designa CONNECT POS 500 is a compact solution for manual payment systems in parking management. It delivers maximum convenience during payment, can also be used for automatic calculation of parking fees, and processes a wide range of barcode tickets – including contract parking tickets, short-term parking tickets, value cards, pre-sale tickets, and special tariffs.

Designa CONNECT EV-CHARGE

The Designa CONNECT E-CHARGING makes charging electric vehicles as easy as parking. With a charging capacity of 11 kW, RFID authentication, and convenient payment directly at the parking payment terminal or via web app, it offers seamless integration into parking management operations.
Thanks to its robust, weather-protected design, it is suitable for both indoor installations and sheltered outdoor areas. No additional ticket, no complicated registration – simply plug in, charge, and pay. Efficient, user-friendly, and compliant with applicable regulations, it is the ideal charging solution for modern parking facilities.

Designa CONNECT VALIDATOR 600 OFFLINE

Boost the efficiency of your parking operations with Designa's innovative discount solutions.

The Designa CONNECT QR COUPONER 600 enables the easy creation of QR discount coupons. Whether value-based or time-based discounts, the code is scanned directly and automatically applied during the payment process. Ideal for freeflow and ticketless parking systems.

Designa CONNECT FOCUS LPR SV/QC/HK/ND

We offer a wide range of license plate recognition (LPR) systems for our ticketless and freeflow solutions. Each system features unique capabilities to meet your individual requirements.

Designa CONNECT QR COUPONER 600

The Designa CONNECT VALIDATOR 600 OFFLINE provides a smart discount solution for barcode tickets. With up to four discount levels and intuitive user guidance, the system can be adapted to any tariff structure.
